SUMMARY

Passionate **Web / Frontend Developer with UI/UX focus**. I turn designs into live, responsive, and interactive web applications. Built multiple Angular web apps (Questify, MoodFood, WanderList) and a full-stack React + Node.js expense tracker (Expenses Splitter) using TypeScript, TailwindCSS, Supabase, Redux Toolkit, and REST APIs, deployed on Vercel and Netlify. Redesigning a live corporate platform (Apex Academy) using PHP, TailwindCSS, HTML, and JavaScript. Experienced in API integration, real-time database syncing, design-to-code workflows (Figma), and cross-team collaboration. Looking for a **Junior Web / Frontend Developer** role where strong frontend engineering, API integration, and Figma-to-code execution drive real product outcomes.

WORK EXPERIENCE

IT Business Analyst

Apex Equity Holdings Berhad | Feb 2026 – Present | Petaling Jaya

- Track IT project risks, cybersecurity compliance, and KRI reporting to management.
- Respond to Bursa Malaysia & Securities Commission (SC) inquiries on IT security, risk, and compliance.
- Collaborate cross-functionally with IT and business teams, translating technical system requirements into actionable documentation, applying the same structured, analytical approach used in frontend feature scoping and sprint planning.
- Leveraged JIRA to track project milestones and coordinate deliverables across departments, reinforcing Agile-aligned workflow practices developed during frontend internship and personal project development.

IT Intern (Internship) → Converted to Full-Time

Apex Equity Holdings Berhad | Aug 2025 – Jan 2026 | Petaling Jaya

- Frontend/UIUX Developer for APEX ACADEMY: redesigned UI using PHP, TailwindCSS, HTML, JavaScript

PROJECTS PORTFOLIO

- **Questify – Gamified To-Do List – 2026**
Angular, TypeScript, TailwindCSS, Supabase, Vercel, OpenWeather API
 - A gamified productivity app that turns daily tasks into RPG-style quests with XP rewards, a level-up system, character progression, and ambient BGM for focus. Features real-time Supabase data sync, OpenWeather API integration for context-aware quest suggestions, and full user authentication, deployed live on Vercel.
- **MoodFood – Mood-Driven Recipe Roulette – 2026**
Angular, TypeScript, TailwindCSS, Supabase, Vercel, Spoonacular API, TheMealDB API
 - A mood-driven recipe discovery app built with a custom Angular roulette wheel component that spins personalised meal suggestions based on user-set cuisine, diet, and calorie preferences. Integrates two live external APIs (Spoonacular & TheMealDB), designed end-to-end from Figma wireframes, and deployed live on Vercel.
- **WanderList – Travel Dashboard & Budget Tracker – 2026**
Angular, TypeScript, TailwindCSS, Supabase, Netlify
 - A full-featured travel planning dashboard for building and managing trip itineraries with day-by-day checklists and an automated budget calculator. Built with modular Angular components, Supabase real-time database, and full CRUD operations across trip, destination, and expense management, deployed live on Netlify.
- **Expenses Splitter – Full-Stack Group Expense Tracker – 2026**
React, Redux Toolkit, Node.js, Express, PostgreSQL (Supabase), Vercel, Render
 - Built a full-stack expense sharing app with mobile-responsive interfaces and isolated multi-group workspaces. Implemented an automated calculation engine using Redux Toolkit to process transaction breakdowns and peer-to-peer debts. Developed a backend REST API with Node.js and Express, integrating a Supabase

PostgreSQL database for real-time cloud data syncing. Deployed frontend on Vercel and backend on Render.

- **Apex Academy (AA) – 2025**

PHP, TailwindCSS, HTML, JavaScript

- Redesigned and enhanced the UI of a live corporate e-learning platform used by Apex Equity staff, rebuilding page layouts, navigation structure, and component styling using PHP, TailwindCSS, HTML, and JavaScript to improve consistency, readability, and user experience.

- **FloralPetals System (Flower Bouquet Custom Ordering System) – 2025**

Java, HTML, CSS, JavaScript, MySQL, JSP, Servlet

- A full-stack web-based e-commerce system for personalised flower bouquet ordering, built with Java (NetBeans), JSP/Servlet, HTML, CSS, JavaScript, and MySQL. Features a multi-step bouquet customisation interface where customers select flower types, bouquet style (Hand-Tied, Round, Posy, Cascade, Ballerina), wrapping colour, ribbon, and materials with a live price preview. Includes real-time inventory management for floral store staff and admin, order tracking for customers, and a delivery status system for delivery personnel, designed using MVC architecture with a fully normalised (3NF) database.

EDUCATION

- **Bachelor of Computer Science (Software Engineering) with Honours**

Universiti Malaysia Terengganu | Oct 2022 – Jan 2026 | 21030 Kuala Terengganu

- Current CGPA: 3.48/4.00
- Dean's List: Semester 3, 6 & 7

- **Physical Science Course**

Kolej Matrikulasi Perak | 2021 – 2022 | Gopeng, Perak

- CGPA: 3.75/4.00

TECHNICAL SKILLS

- **Core Frontend**

- HTML, CSS, JavaScript, TypeScript, TailwindCSS, Angular, React, Redux Toolkit

- **Version Control & Deployment**

- Git (version control), GitHub, Netlify, Vercel

- **Additional Languages**

- PHP, JSP/Servlet, SQL, MySQL, Node.js, Express

- **Design & Tools**

- Figma, Canva, Apache NetBeans, JIRA, Selenium, Supabase, REST API

PROFESSIONAL DEVELOPMENT

- Participant of PETRONAS BeDigital BootCamp – *Miniseries* (2025)
- K-Youth Development Programme by Khazanah Nasional (2025)
- University representative in International Academic and Cultural Exchange (UNIKOM SCHOLAR) at Universitas Komputer Indonesia, Bandung, Indonesia (2023)

HONORS AND AWARDS

- Best Participant in Lecture 6: Scientific Paper Writing in the UNIKOM Student Course and Heritage for Overseas Learning and Academic Research (SCHOLAR), 2023
